

Book Scraper User Manual

- Setup
 - Ensure Python is installed on your computer.
 - Install the necessary libraries using: `pip install requests beautifulsoup4`.
- Launching the Tool
 - Run the script via your terminal: `python your_script_name.py`.
 - The tool will automatically connect to the live site and fetch the latest genres.
- Selecting a Genre
 - Review the numbered list of categories.
 - Type the number of the genre you want to explore and hit Enter.
- Viewing the Books
 - The script will display a list of all books in that category.
 - Books are automatically sorted by rating (highest rated books appear at the top).
- Retrieving Book Details
 - Choose a specific book by typing its list number.
 - The script will print the UPC, Stock availability, and a Plot summary.
 - A URL is provided at the bottom if you want to view the book in your browser.
